- Git

### PROJECTS

#### NAAC EASY

Product Landing page: <https://www.naac.pro/>

Product Link: <https://demo.naac.pro>

**Technologies:** HTML5, CSS3, React JS, Tailwind CSS

#### Responsibilities:

- Lead developer for Front end
- Query Optimization, Code review, and merge
- Creation of reusable UI components
- Coordinate with backend developers, guide Jr. Developers, and back-end integration

Easy NAAC Pro is a data management portal for educational institutions. For getting accreditation to various quality management organizations, they need to manage data based on a specific. This data management software helps to collect the data using a dynamic form system. It supports the report generation from the dynamic data to reduce the efforts of the institution

## React-former

**Package:** <https://www.npmjs.com/package/@sajith-pj>

**Technologies:** HTML5, SCSS, Next JS, Rollup

### Responsibilities:

- Lead developer
- Code structuring, code merging, creating reusable form components
- validation, bundling using rollup and publishing into the NPM registry

**@sajith-pj/react-former** is a package that helps to create forms in ReactJS using JSON data, which will also handle form validations using JSON data. This will reduce the effort to render forms in react js projects.

Forget forms remember **@sajith-pj/react-former**

## Reliva Global

**Product Landing Page:** <https://www.relivaglobal.com/>

**Product Link:** <https://app.relivaglobal.com/>

**Technologies:** HTML5, SCSS, Next JS, Rollup

### Responsibilities:

- Lead developer
- Creation of reusable UI components
- Integration of frontend with backend
- Code validation and structuring

It is a web 3.0 project. Reliva Global provides crypto currencies and NFT trading and referral reward systems. I have led the project from scratch and created the whole frontend of this application in Next JS.

## Get Paid By Link

**Product Landing Page:** <https://app.onlinecheckwriter.com>

**Product Link:** N/A

**Technologies:** HTML5, CSS3, JavaScript, Tailwind CSS, React Js, Webpack, Laravel

### Responsibilities:

- Lead developer
- Creation of reusable UI components in React JS
- converting the ReactJS application into a CDN
- Integration of frontend with backend

I am very proud to be a part of this feature. Get paid by link is a feature in <https://app.onlinecheckwriter.com>. This feature is like a payment gateway, which is integrated with **Yodlee, Stripe, Bitpay, and Paypal**, an onlineCheckWriter user can request payment or can accept payment through a link, a user can accept payment with the help of onlineCheckWriter using this feature as a payment widget he will get a CDN and some code snippet to use this feature. I am the only one assigned to the task to develop the frontend in React Js

## SecurityFactory

**Product Landing page:** N/A

**Product Link:** N/A

**Technologies:** React JS.

### Responsibilities:

- React Js developer
- Code review, and merge
- Creation of reusable UI components
- Coordinate with backend developers for back-end integration

SecurityFactory is a part of the Cloudfactory of Syngenta. I was the only frontend developer who is assigned to this project, for satisfying the requirements. SecurityFactory is a platform that will find the vulnerabilities and its severity of a web application

## ACHIVEMENTS

- Attended a webinar on "Build your career in Android Development" in Christ College (Autonomous), Irinjalakuda
- Attended a webinar on "Employability in IT Industry" by RP2 company
- Coordinator of Computer Science Association day conducted in College of Applied Science Kuzhalmannam.
